Quote	As Danish economist Bjorn Lomborg notes, it entails costs of over \$1 trillion a year to shave 0.36 degrees Fahrenheit off global temperatures by 2100 — a tenth the reduction it said is necessary. The better response, Lomborg argues, is massive R&D in non-carbon power — so that humanity needn't impoverish itself to "save the planet." As he pursues smart post-Paris policies, Trump ought to boost outlays for "green energy" R&D. America has far cleaner air and water than it did 50 years ago, and more parkland. It should continue those trends, and keep reducing its carbon emissions — democratically.
